PBN releases AOCM3000 Series ActiveEthernet Switch Series

Beijing, China, 31 January 2012 –Pacific Broadband Networks (PBN) is pleased to announce the availability of its new 1RU ActiveEthernet switch series AOCM3000. This new switch generation is tailored towards the demands of triple-play ActiveEthernet FTTX networks in commercial as well as residential deployments. With its comprehensive set of software features, this switch series can be deployed as subscriber-access switches as well as aggregation switches with backbone uplink capabilities. Its powerful wire-speed switching matrix supports a comprehensive set of security features protecting subscribers as well as backbone with broadcast storm control, multicast control, and a layer 2-7 access control system.

“With the new AOCM3000 series, PBN has demonstrated once again that comprehensive FTTX solutions do not have to be complicated or expensive. This new addition to the PBN FTTX solutions portfolio complements our carrier-grade AOCM6000 chassis-based solution. Especially tier-3

operators prefer scalable 1RU-based switching products allowing the network to grow with their subscriber base to control upfront cost. And the AOCM3000 is the perfect product supporting a deployment scenario like this.”, said Mr. Gerhard Nederlof, President of PBN.

The new AOCM3000 series switches are available immediately with a range of 10Gigabit Ethernet interface cards, SFPs as well as redundant power-supplies. Please contact your sales representative or visit www.pbnglobal.com for further information.

About PBN

PBN is an experienced global supplier of optical broadband products and technology solutions for HFC, RFoG, FTTx and EMS/OSS applications. We enable profitable and scalable transitions to IP Networks, nowadays required by a consumer-empowered world. PBN is well known globally for its innovation and expertise, offering advanced fibre optic products and solutions for applications demanding high bandwidth for transporting video, VoIP and high-speed data. Today our products are being installed to deliver comprehensive broadband access solutions to over 30 million subscribers, served by hundreds of headend facilities worldwide.

PBN simplifies the operator’s transition to IP Networks by providing interoperable, IP-based solutions that help put consumers in control. PBN’s products and solutions for high-integrity infrastructures enable operators to build or upgrade their network to meet today’s requirements. PBN’s innovative EMS and OSS solutions will make it easy to control services offered via the network, maintaining the highest level of quality. PBN’s global expertise facilitates network operators’ ongoing efforts to support a seamless transition to a connected world.

PBN’s offices are located in China, Europe, Australia and the Americas. Local presence by a large number of channel partners extends PBN’s regional business and service support. For more information about the Company, the people, the products and solutions, please visit www.pbnglobal.com .
