## PBN moves Beijing operations to a new facility

**Melbourne, Australia, 10 November 2010** - Pacific Broadband Networks (PBN) today announced that the company has moved the Beijing operations to a new facility.

The new facility is much larger than the old one. The impressive interior boasts a large floor space, which incorporates a sales office as well as a state-of-the-art laboratory. The laboratory is a complete research, design and development facility, with the latest interoperability testing equipment. It is perfectly segmented to focus on key areas of optical broadband technology like HFC, RFOG and FTTH - including hardware, firmware and software developments.

The move to a larger facility was well overdue. For many years now the company has experienced a sustained rate of growth and increasing sales opportunities in this region. The new facility will provide the company with the ability to expand and implement its strategic plans for the next 5 years and beyond.

Mr. Bill Zhang, Chairman/CEO of PBN said, "This new facility is a significant step towards the future. The team is very proud of the new facility. It will provide the company with the much needed flexibility and room to move. Right now we are all very excited about our future and the anticipated prospects."

The new facility is in a prime location in the central business district of Beijing. The address is:

Unit 403, Entrance C, Building No. 201  
A-10, Jiuxianqiao Beilu, Chaoyang District  
Beijing 100015, China

The contact numbers have also changed.

Telephone: +86 10 5791 0655  
Facsimile: +86 10 5791 0855  
Email: [office@pbn.com.cn](mailto:office@pbn.com.cn)

## About PBN

PBN is an experienced global technology company and is well known for offering advanced optical broadband products and solutions for the new wave of cross-media connectivity. The high-quality transmission products provide Network Operators with the perfect solution for advanced HFC, RFoG and FTTH applications.

PBN's products have evolved from many years of R&D excellence through innovation and experience. Today they are responsible for delivering comprehensive broadband distribution and access solutions to over 30 million subscribers, served by hundreds of headend facilities worldwide. PBN bridges infrastructure and supports an evolving and connected world.

PBN has a state-of-the-art research and development facility in Melbourne (Australia) and also in Beijing (China). Originating in Australia over 15 years ago, the company now has offices in America, Australia, China, Europe and Hong Kong. PBN is also well represented by channel partners globally.
